Executive summary

TagScanner is a Chrome Extension designed by Adobe Consulting Services for scanning and helping you understand more details about your Adobe Tags' property. This tool is meant to provide you a way to know more about:

1. Inter connection between Data Elements, Rules and Extensions
2. Size of each component as well as the library
3. Details of Data Elements, Rules and Extensions
4. Details of AppMeasurement and Web SDK components
5. And more...

This tool is a more smarter way to know more about Tags and find ways of optimizing or just understand the details of your library. We hope you will find this utility useful.

How to install TagScanner?.....	5
How to use TagScanner?	10

How to install TagScanner?

TagScanner is designed to work as a Google Chrome extension. We are in the process of submitting the extension to be a part of Google Marketplace. In the meantime, you can follow the steps for installing it for your browser:

Step 1: Access the TagScanner git and click on the 'Download Zip' button to download a zipped version of TagScanner

[TagScanner Git](#)

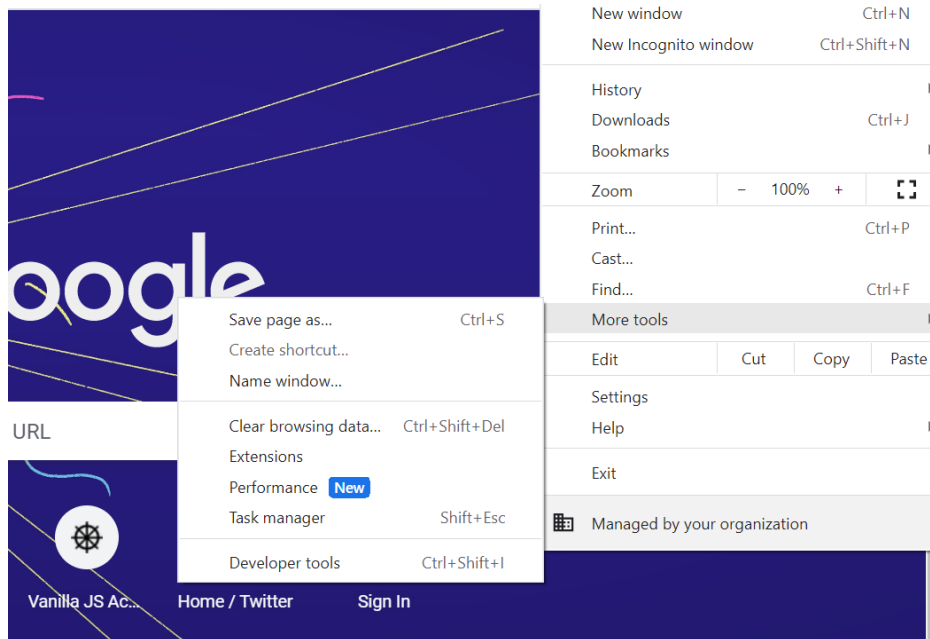

Step 2: Unzip the file in a folder on your system:

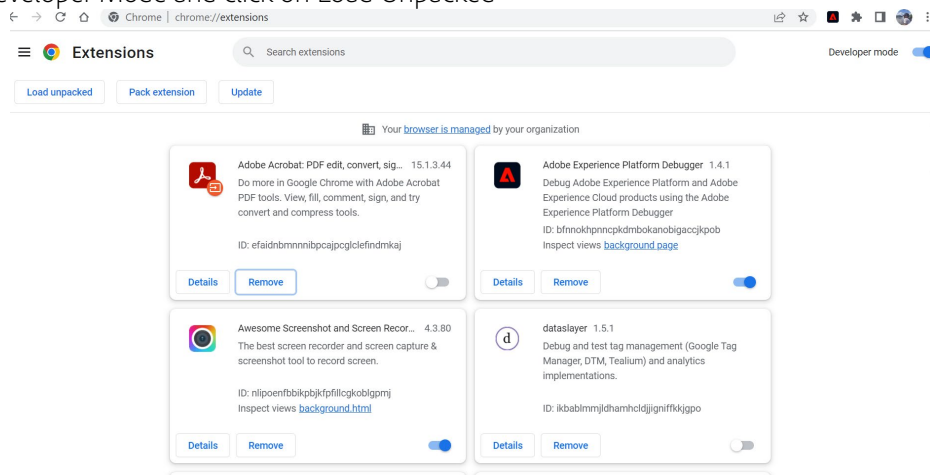

☐	Name	Status	Date modified	Type	Size
	css	✓	5/4/2023 2:20 PM	File folder	
	images	✓	5/4/2023 2:20 PM	File folder	
	img	✓	5/4/2023 2:20 PM	File folder	
	js	✓	5/4/2023 2:20 PM	File folder	
	vendor	✓	5/4/2023 2:21 PM	File folder	
	background	✓	5/3/2023 9:58 PM	JavaScript Source File	1 KB
	content_script	✓	5/3/2023 9:58 PM	JavaScript Source File	1 KB
	display	✓	5/4/2023 2:10 PM	Chrome HTML Docu...	5 KB
	display	✓	5/3/2023 9:58 PM	JavaScript Source File	1 KB
	manifest	✓	5/3/2023 10:08 PM	JSON Source File	2 KB
	popup	✓	5/3/2023 11:01 PM	Chrome HTML Docu...	17 KB
	popup	✓	5/3/2023 9:58 PM	JavaScript Source File	6 KB
	search	✓	5/3/2023 9:58 PM	Chrome HTML Docu...	4 KB
	search	✓	5/3/2023 9:58 PM	JavaScript Source File	8 KB

Step 3: Install it in Chrome

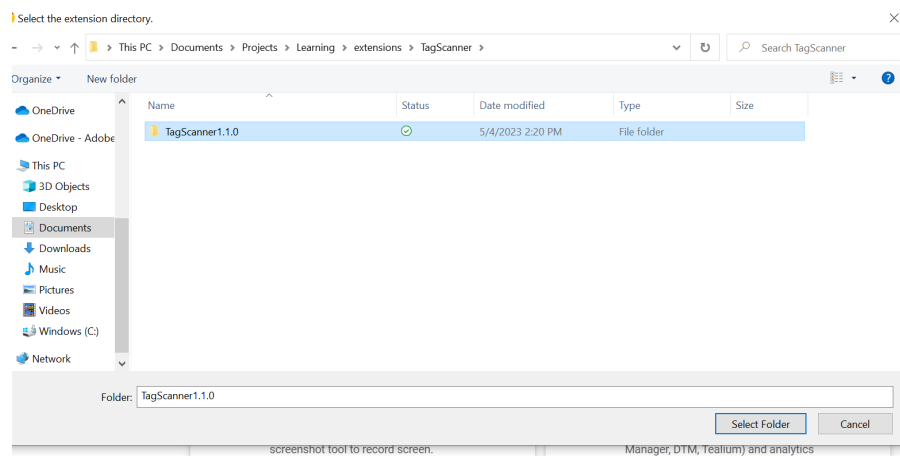

3a: Go to Google Chrome and open the extension panel by going to Tools > Extensions

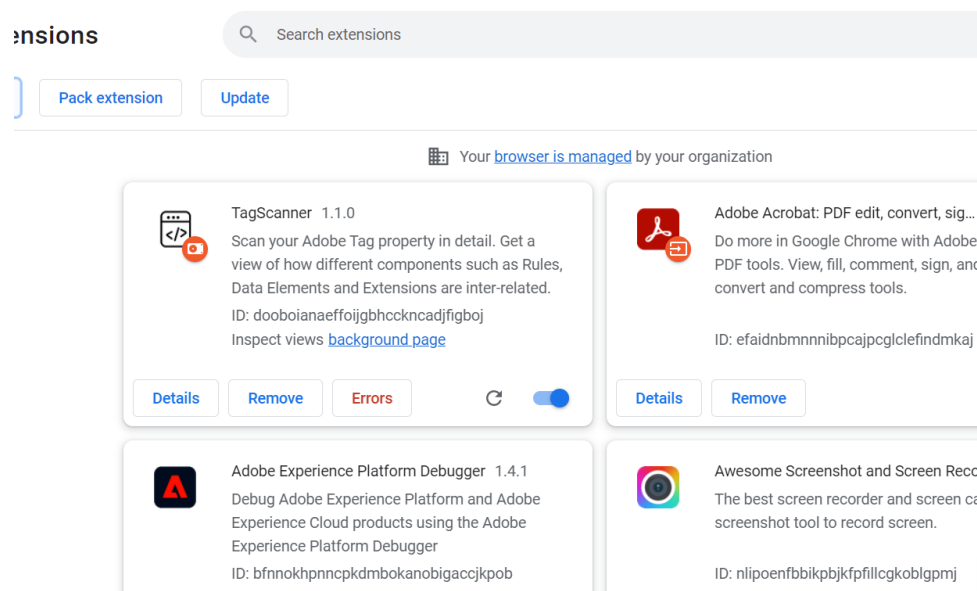

3b: Enable Developer Mode and click on Load Unpacked

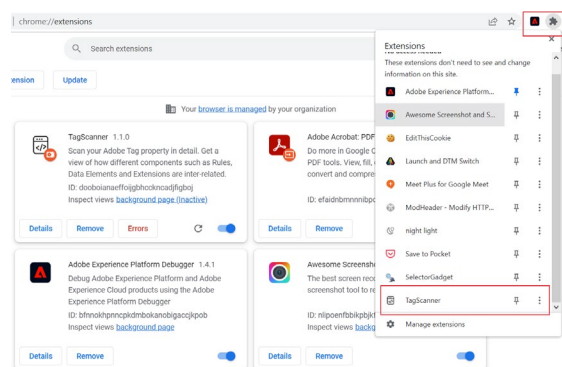

3c. Browse to the Extension Directory and click on Select Folder

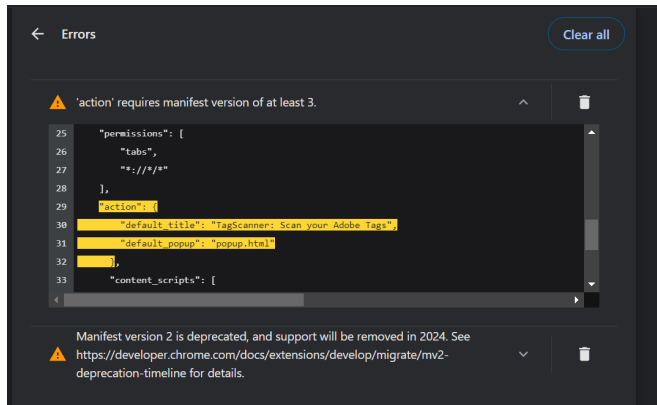

3d. Once done, you will see the TagScanner extension integrated in your Extensions panel

3e. The TagScanner tool is now available as an Extension in your browser. Don't forget to click on the pin button to gain easy access!

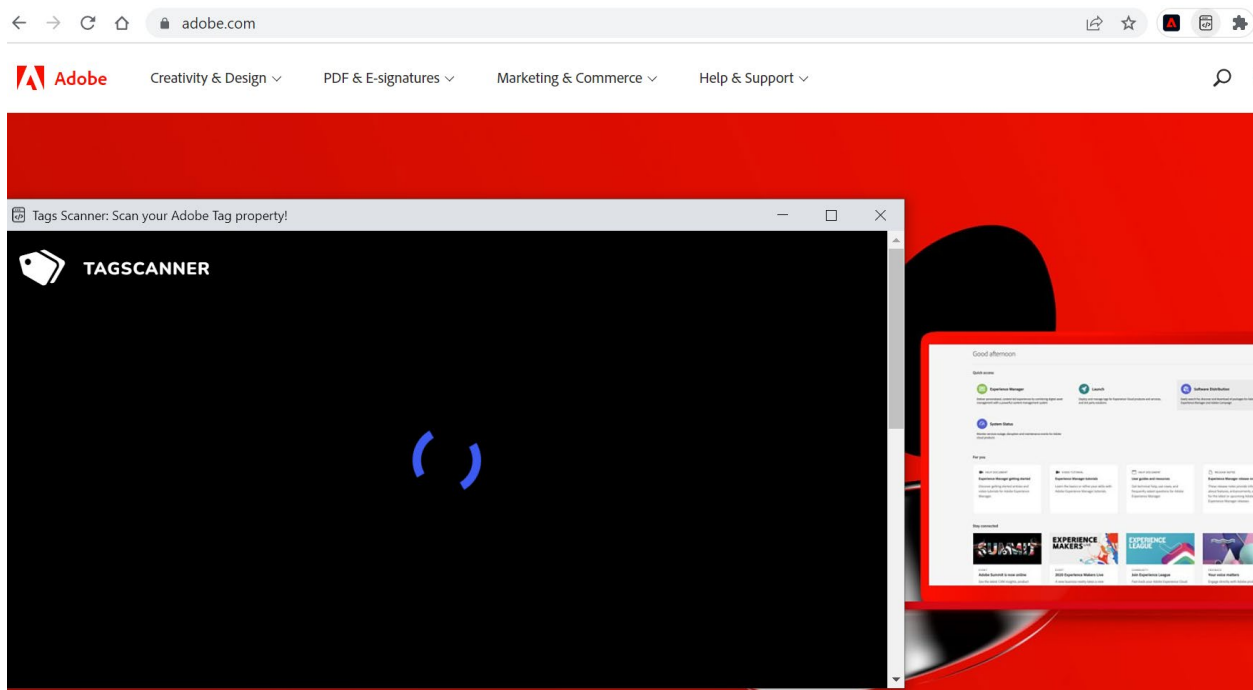

You will also see some errors if you click on the 'Errors' button in the Extension Panel. You can safely ignore as the extension is using a v2 version of manifest while Google recommends using a v3 version.

Please Note: If you run TagScanner after installing in an already opened browser window, you will get a 'No Scripts Present' error. To avoid facing the error, please close all the windows and open a new session.

Step 4: Once installed, you can use the TagScanner as any other extensions. Open the site and click on the TagScanner extension icon.

A popup window will load the tool

Components Overview

Login to Enable Search Feature

TagScanner is a utility designed by Adobe Consulting Services for Adobe Tags. Get information about your active Adobe Tags Property and answers queries such as:

How do I ascertain the size of my library impacting my website?

Where can I get a list of elements that are significantly larger in size?

How many data elements are active and not used even once in any of my rules, extensions or data elements?

Features activated in this release:

A component view of Data Elements, Rules and Extensions

Filtering Data Elements and Rules based on logic

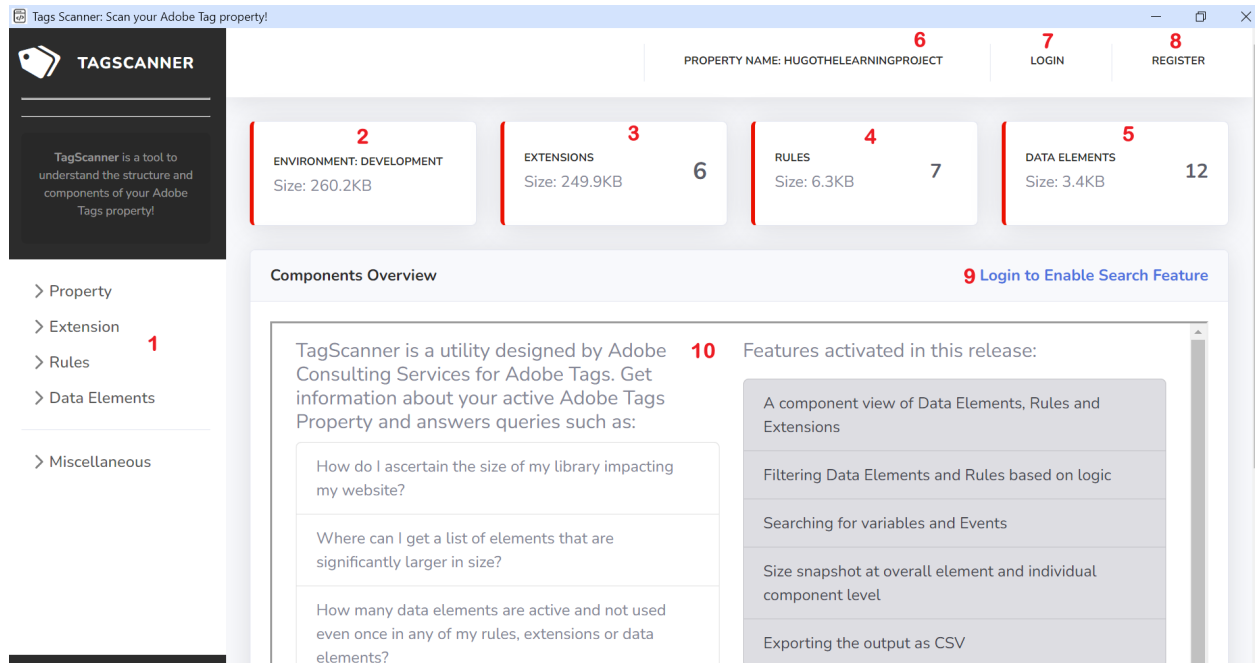

Searching for variables and Events

Size snapshot at overall element and individual component level

Exporting the output as CSV

Note: For security reasons, we only enable users with an '*.adobe.com' email ID access to view the details

How to use TagScanner?

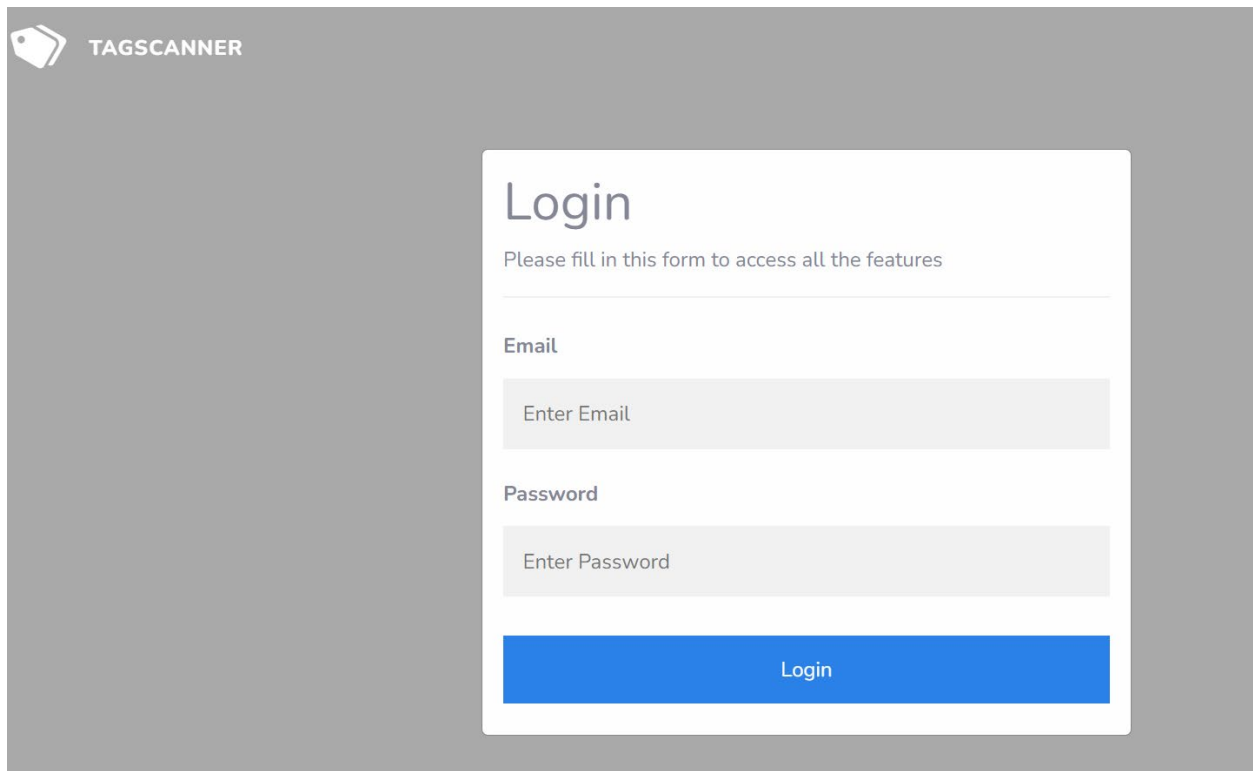

A list of features

1. Access to property, extension, rules, data elements and miscellaneous window
2. Which environment is the library using?
3. Overview of the number of Extensions enabled in your property, and overall size of the Extensions.
4. Overview of the number of Rules enabled in your property, and the overall size of Rules component.
5. Overview of the number of Data Elements enabled in your property, and the overall size of Data Elements.
6. The currently active property name
7. Ability to login (currently for email addresses on adobe.com)
8. Ability to register (coming soon)
9. Search functionality (activated only on login)
10. Window where the content is loaded

Login:

Every user is required to first login to activate the tool. We only are accepting users with an 'adobe.com' ID for now.

The login form is centered on a dark gray background. It features the TagScanner logo in the top left corner. The form itself is white with a blue 'Login' button at the bottom. The text 'Please fill in this form to access all the features' is displayed above the input fields.

Rules

Rule Name	Used In Rule: Actions	Used In Rule: Events	Used In Rule: Conditions
[playground][custom events button tracking]	No	Yes	No
Initialize Plugins v1	No	Yes	No
Global	No	Yes	No
[playground][iframe tracking]	yes	Yes	No
[playground][direct call rule tracking]	No	Yes	No
[playground][custom attribute example]	No	Yes	No
[playground][custom attribute tracking]	No	Yes	No

Data Elements

Data Element Name	Extension	Time
-------------------	-----------	------

Rules Details:

At first glance, you get a view of all the rule names currently created and the different components for each rule such as what event type it uses, does it have any conditions, does it utilize the core extension, the size of the rule etc.

In this feature, we have split Rules based on whether the website is on AppMeasurement or WebSDK.

The screenshot shows the TagScanner interface. On the left is a sidebar with a navigation menu: Property, Extension, Rules (selected), Data Elements, and Miscellaneous. The main area is titled 'Components Overview' and contains a 'Rules Details' table. A red arrow points to the 'App Measurement details' link in the sidebar, and another red arrow points to the 'Web SDK details' link. A third red arrow points to the 'Export CSV File' link in the top right of the table.

Rule Name	Event Type	Conditions	Core	Analytics	Web SDK	size in KB
[playground][custom events button tracking]	customEvent	No	No	Yes	No	1.01
Initialize Plugins v1	libraryLoaded	No	No	No	No	0.79
Global	pageBottom	No	No	Yes	No	1.04
[playground][iframe tracking]	click	No	Yes	Yes	No	1.03
[playground][direct call rule tracking]	directCall	No	No	Yes	No	0.85
[playground][custom attribute example]	click	No	No	Yes	No	0.7

Click on 'App Measurement details' and click on 'View AA Variables' to know about the different OOTB and custom eVars, props and events which are being utilized by the particular Rule in AppMeasurement method.

The screenshot shows the TagScanner interface with the 'View AA Variables' button highlighted by a red arrow. The main area displays the 'Adobe Analytics Variables Details' table, which lists variables for each rule. The table has columns for Rule Name, eVars, Custom eVars, Props, Custom Props, Events, and Custom Events.

Rule Name	eVars	Custom eVars	Props	Custom Props	Events	Custom Events
[playground][custom events button tracking]	eVar1 eVar11 eVar12 eVar13					
Global	eVar1 eVar2 eVar3 eVar5 eVar6 eVar7 eVar8 eVar9 eVar10					
[playground][iframe tracking]	eVar1					
[playground][direct call rule tracking]	eVar11 eVar12 eVar13					

If you want to know details about a property that is on WebSDK, then click on 'Web SDK details' link and you will see a list exposing values such as:

Search

We have included an all-encompassing search feature that will help you search for a particular variable or a particular XDM object

Variable Search

If you are interested in finding more details about a particular variable, prop or an event, you can simply use the Global Search feature. The result will display the different Rules, Data Elements and Extensions in which this variable/event is being used.

The screenshot displays the TagScanner web application. On the left is a dark sidebar with the 'TAGSCANNER' logo and a description: 'TagScanner is a tool to understand the structure and components of your Adobe Tags property!'. Below this is a navigation menu with links: '> Property', '> Extension', '> Rules', '> Data Elements', and '> Miscellaneous'. The main content area is titled 'Components Overview'. At the top right of this area, there are three tabs: 'PROPERTY NAME: HUGOTHELEARNINGPROJECT', 'RITESHG@ADOBE.COM', and 'REGISTER'. A red arrow points to a 'Search Variables' link in the top right corner. Below this, a teal header reads 'Search for variables:'. Underneath is a search bar with a red arrow pointing to it, a magnifying glass icon, and the text 'Search Result Displayed for : eVar12'. To the right of the search bar is a note: 'Note: Search for actual variable name and not a generic term or number. E.g. eVar4, event4, prop4 and not var4 or 0.' Below the search bar, a red arrow points to a section titled 'Rules: 3'. This section contains a table with four columns: 'Rule Name', 'Rule Action', 'Rule Condition', and 'Rule Event'. The table lists three rules, all with 'Yes' for Rule Action and 'No' for Rule Condition and Rule Event.

Rule Name	Rule Action	Rule Condition	Rule Event
[playground][custom events button tracking]	Yes	No	No
[playground][direct call rule tracking]	Yes	No	No
[playground][custom attribute example]	Yes	No	No

XDM Object Search

If you are interested in finding more details about a particular XDM object, you can use the XDM Object Search that is available inside the Web SDK details window
